

Employee Stored Procedure Script

Use the following script written in the same format as the above content. It includes table creation, insert, retrieval, deletion, and update stored procedures for the **Department** and **Employee** tables.

Table Creation Procedures

Create the **Department** table first and then create the **Employee** table so the foreign key relationship can be applied correctly.

```
CREATE PROCEDURE CreateDepartmentTable
AS
BEGIN
    CREATE TABLE Department
    (
        DepartmentID INT IDENTITY(1,1) PRIMARY KEY,
        DepartmentName VARCHAR(50) NOT NULL
    );
END;
```

```
EXEC CreateDepartmentTable;
```

```
CREATE PROCEDURE CreateEmployeeTable
AS
BEGIN
    CREATE TABLE Employee
    (
        EmployeeID INT IDENTITY(1,1) PRIMARY KEY,
        FirstName VARCHAR(50) NOT NULL,
        LastName VARCHAR(50) NOT NULL,
        Email VARCHAR(50),

        DepartmentID INT NOT NULL,

        CONSTRAINT FK_Employee_Department
        FOREIGN KEY (DepartmentID)
        REFERENCES Department(DepartmentID)
    );
```

```
END;
```

```
EXEC CreateEmployeeTable;
```

Data Insertion Procedures

Use these procedures to insert records into the **Department** and **Employee** tables.

```
CREATE PROCEDURE SP_AddDepartment
```

```
(  
    @DepartmentName VARCHAR(50)  
)
```

```
AS
```

```
BEGIN
```

```
    INSERT INTO Department
```

```
    (  
        DepartmentName  
    )
```

```
VALUES
```

```
(  
    @DepartmentName  
)
```

```
END;
```

```
EXEC SP_AddDepartment
```

```
    @DepartmentName="HR Management"
```

```
CREATE PROCEDURE SP_AddEmployee
```

```
(  
    @FirstName VARCHAR(50),  
    @LastName VARCHAR(50),  
    @Email VARCHAR(50),  
    @DepartmentID VARCHAR(50)
```

```
)
```

```
AS
```

```
BEGIN
```

```
    INSERT INTO Employee
```

```
(
```

```

    FirstName,
    LastName,
    Email,
    DepartmentID
)
VALUES
(
    @FirstName,
    @LastName,
    @Email,
    @DepartmentID
);
END;

EXEC SP_AddEmployee
    @FirstName="Ravi",
    @LastName="Mohan",
    @Email="Ravi@gmail.com",
    @DepartmentID=1

```

Retrieval Procedures

The following procedures are used to retrieve employee and department records by ID or to fetch all records.

```

CREATE PROCEDURE SP_GetEmployeeByID
(
    @EmployeeID INT
)
AS
BEGIN
    SELECT * FROM Employee WHERE EmployeeID=@EmployeeID;
END;

EXEC SP_GetEmployeeByID
    @EmployeeID=1

CREATE PROCEDURE SP_GetAllEmployees
AS

```

```

BEGIN
    SELECT * FROM Employee;
END;

EXEC SP_GetAllEmployees;

CREATE PROCEDURE SP_GetDepartmentByID
(
    @DepartmentID INT
)
AS
BEGIN
    SELECT * FROM Department WHERE DepartmentID=@DepartmentID;
END;

EXEC SP_GetDepartmentByID
    @DepartmentID=1

CREATE PROCEDURE SP_GetAllDepartments
AS
BEGIN
    SELECT * FROM Department;
END;

EXEC SP_GetAllDepartments;

```

Deletion and Update Procedures

Use the following procedures to delete records by ID and update existing employee and department information.

```

CREATE PROCEDURE SP_DeleteEmployeeByID
(
    @EmployeeID INT
)
AS
BEGIN
    DELETE FROM Employee WHERE EmployeeID=@EmployeeID;
END;

```

```
EXEC SP_DeleteEmployeeByID  
    @EmployeeID=1
```

```
CREATE PROCEDURE SP_DeleteDepartmentByID  
(  
    @DepartmentID INT  
)  
AS  
BEGIN  
    DELETE FROM Department WHERE DepartmentID=@DepartmentID;  
END;
```

```
EXEC SP_DeleteDepartmentByID  
    @DepartmentID=2
```

```
CREATE PROCEDURE SP_UpdateEmployee  
(  
    @EmployeeID INT,  
    @FirstName VARCHAR(50),  
    @LastName VARCHAR(50),  
    @Email VARCHAR(50)  
)  
AS  
BEGIN  
    UPDATE Employee  
    SET FirstName=@FirstName, LastName=@LastName, Email=@Email  
    WHERE EmployeeID=@EmployeeID;  
END;
```

```
EXEC SP_GetAllEmployees;
```

```
EXEC SP_UpdateEmployee  
    @EmployeeID=2,  
    @FirstName="Sriven",  
    @LastName="Bommakanti",  
    @Email="Srie@gmail.com"
```

```
CREATE PROCEDURE SP_UpdateDepartment
(
    @DepartmentID INT,
    @DepartmentName VARCHAR(50)
)
AS
BEGIN
    UPDATE Department
    SET DepartmentName=@DepartmentName
    WHERE DepartmentID=@DepartmentID;
END;

EXEC SP_GetAllDepartments;

EXEC SP_UpdateDepartment
    @DepartmentID=1,
    @DepartmentName="IT"
```
